Futurego for Fleet

Seamless charging for your EV drivers at home, in the company or on the public network using chip or mobile app.

- An intuitive tool to control and optimise your fleet
- Real-time monitoring of charging stations
- Resolution of home, business and public charging
- Repositories and billing documents
- Add and edit cars and drivers in your fleet
- Optimisation of electric vehicle charging infrastructure
- Saving time and costs

We professionally manage the entire process from design to implementation of the charging infrastructure. We offer a complete solution for your fleet.

Fleet

We offer a comprehensive solution for charging a company's fleet of electric vehicles, including modern charging stations and software solutions for efficient management.

eBuses

We will ensure the operation of electric buses with our infrared charging structure designed specifically for public transport.

eTrucks

We are helping the transition to sustainable transport with our fast charging stations for trucks.

Design to build

The design of a solution does not happen at the table. We'll scout the site and create a unique solution to meet your needs.
